
Overview of Computers

Instructor – Dr. Shiv Ram Dubey

System Software

Operating System Functions

- Perform common computer hardware functions
- Provide an user interface
- Provide a degree of hardware independence
- Manage system memory
- Manage processing tasks
- Provide networking capability
- Control access to system resources
- Manage files

Utility Software

- Utility software (a type of system software) is designed to help you monitor and configure settings for your computer system equipment, the operating system, or application software.

Language Translators

- ❑ Systems software that converts a programmer's source code into its equivalent in machine language
 - ❑ Compilers
 - ❑ Interpreters

Language Translators

- ❑ Systems software that converts a programmer's source code into its equivalent in machine language
 - ❑ Compilers
 - ❑ Interpreters

Source code

High-level program code written by the programmer

Object code

Another name for machine language code

Compilers

A language translator that converts a complete program into machine language to produce a program that the computer can process in its entirety

Compilers

Step 1: Translate program

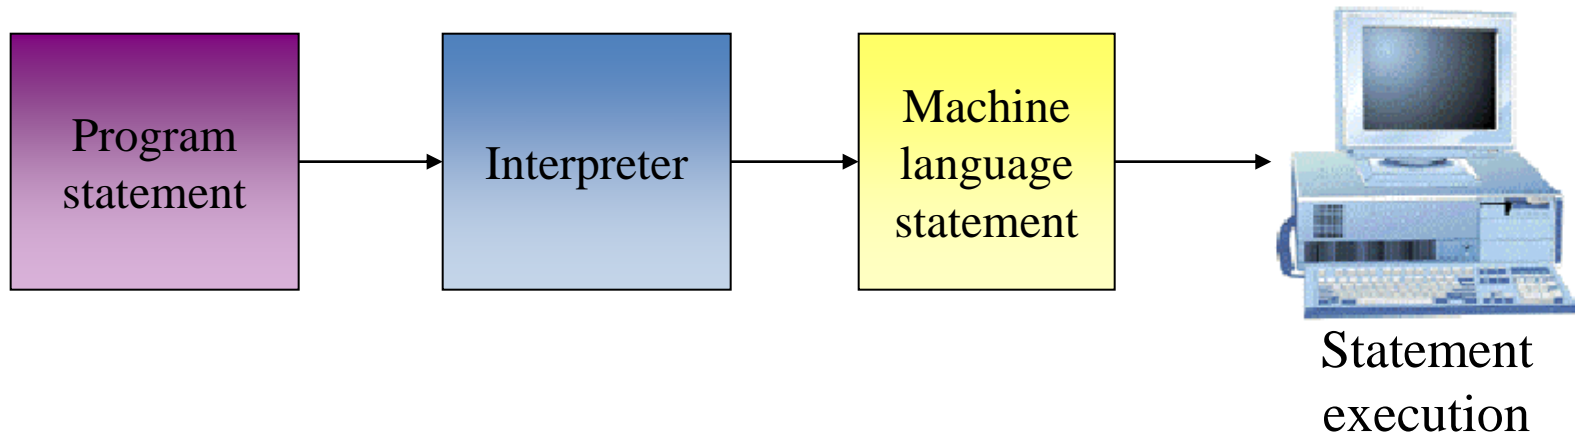

Step 2: Execute program

Interpreters

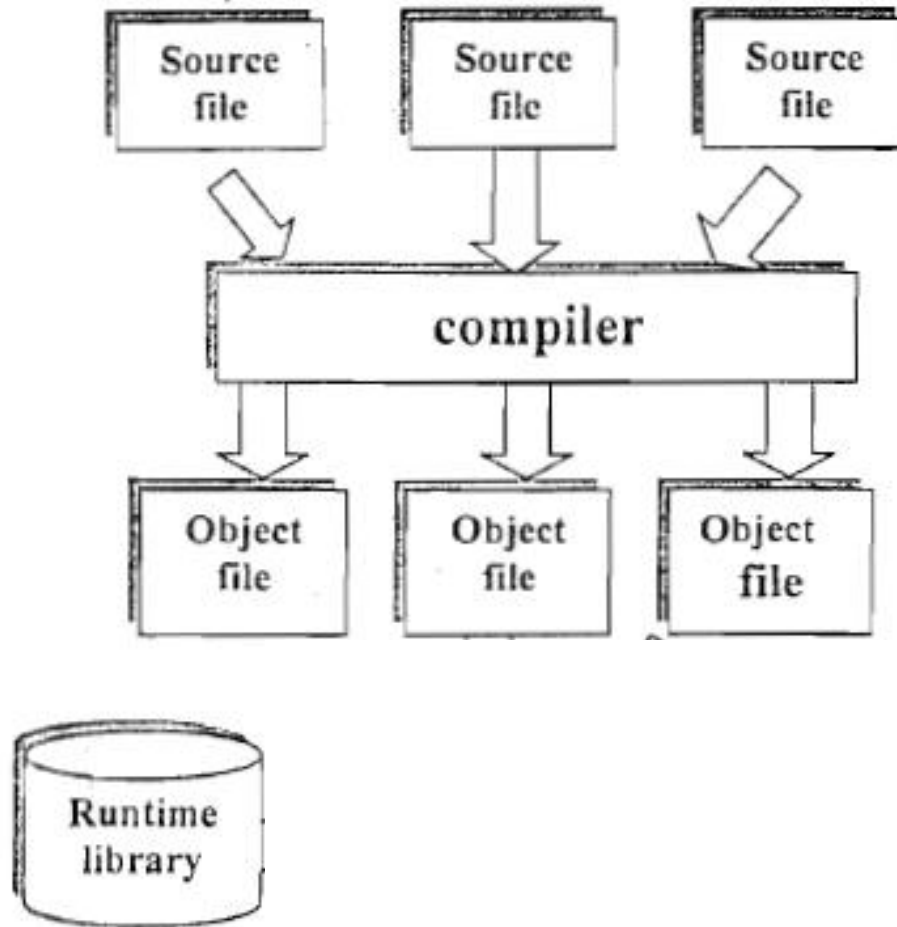

A language translator that translates one program statement at a time into machine code

Linker

Linker

Linker

Linker

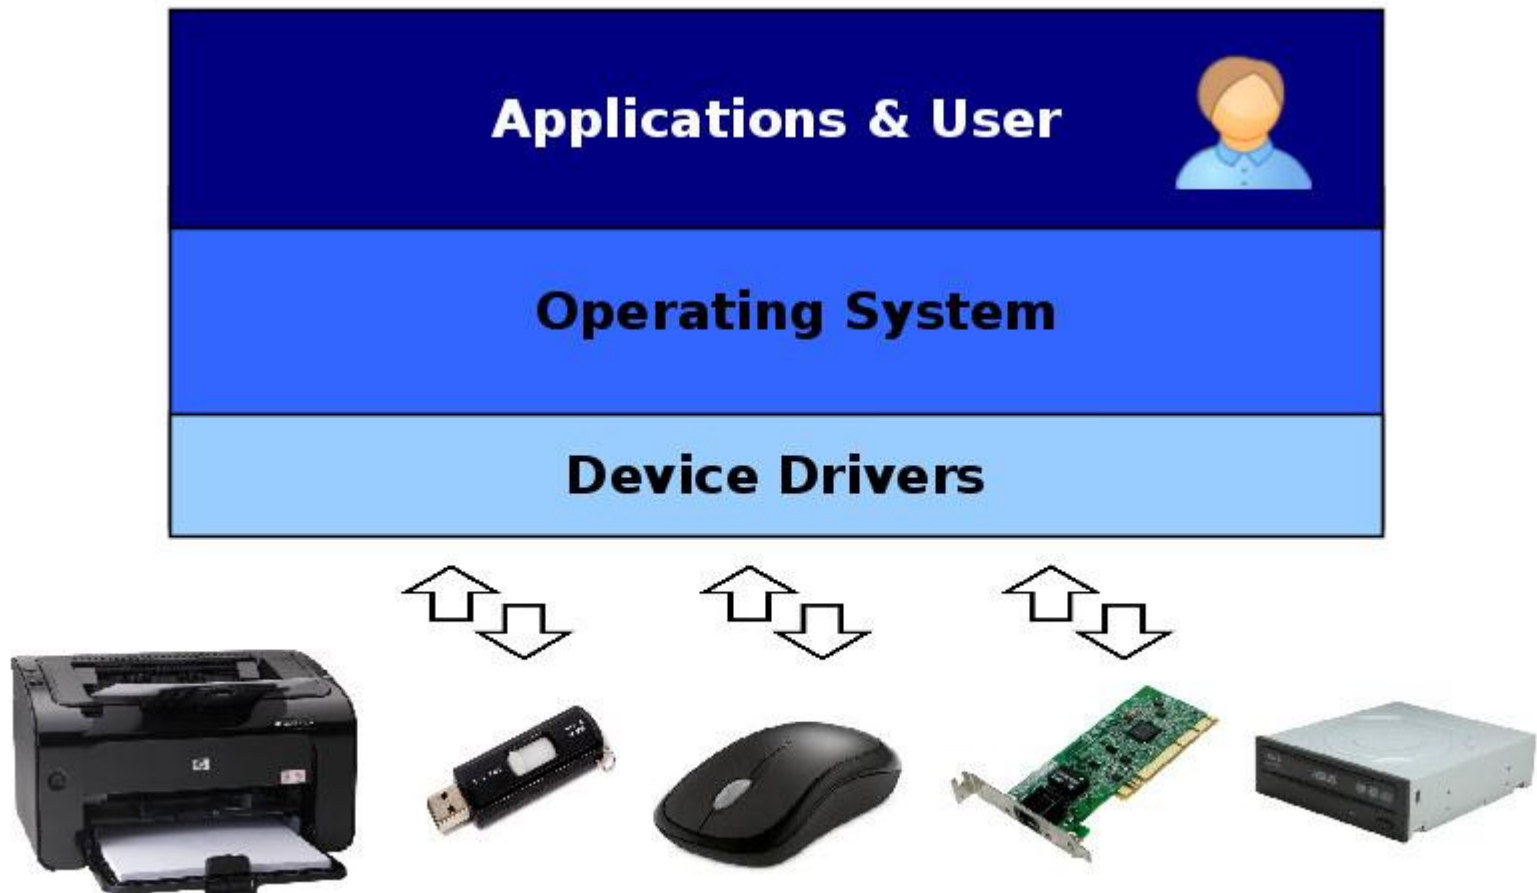

Loader

Loader -

- loads the executable code into memory
- creates the program and data stack
- initializes the registers
- starts the code running

Device Drivers

- A device driver is software that helps a peripheral device establish communication with a computer.

BIOS
